Plant Labels

Rainbow manufactures a full range of Plant Labels which include Pot Labels, Stick Labels, T-Labels, Bed Labels and Angled Labels in various colours and materials. We can now offer our full range of labels using 100% Environmentally Friendly material using the reclaimed refrigerator internals. We prefer to use High Impact Polystyrene for our labels as this does provide a superior label being impact resistant even at temperatures well below freezing. This material is also very slightly porous which allows for easy permanent marking, making it the ideal label material especially when used with our special indelible ink Rainbow Marker Pen.

The standard colour for our labels is white but we can supply all our labels in a variety of colours made to special orders.

Our range also includes a range of Loop Lock Labels which is available in a wide selection of colours, sizes and materials.

Cane Caps

We offer a simple range of three Cane Caps made out of 100% recycled material. The Economy Cane Cap is our lowest price unit which fits bamboo and split canes up to 8mm diameter. We then offer our mid range Deluxe Cane Cap which is made in a good soft material which accommodates canes between 6 and 12mm diameters. Our largest Cane Cap is a very large tri-pod style cap which is for use on canes of any size or can be used to hold three small canes together above a young climbing plant.

Plant Rings and Clips

We offer 2 plant rings which are approximately 25mm in diameter which feature a spring opening for easy use. These are very inexpensive and simple fixings which are available in a soft green plastic or alternatively in a Galvanised coated steel wire.

Rainbow also manufacture a range of Plant Clips which hold young plant stems to straining wires of various diameters.

Rainbow Tying Tapes and Tubes

We offer an alternative range of tapes and tying tubes to the standard Max products which covers the complete range of colour and thickness options. Rainbow tapes have three advantages over the standard Max tapes which are firstly Rainbow tape has a higher tensile strength and level of elasticity making much less likely to break. Secondly, the tape is supplied on a central plastic spool which will not swell in damp or wet conditions which helps the tying machines work more efficiently. Finally our tape is all made in one factory giving a good uniform quality whereas the Max comes from at least 4 different factories all of varying quality.

Our Tying Tube or Spindlebush has a good wall thickness of Flexible PVC offering considerable strength and longevity which can be reused many times over.
